DM Verification Control Document

1 Introduction

The requirements on the LSST Data Management System are described in LSE-61 and in the various lower-level requirements documents (e.g. LDM-554, LDM-555, LDM-636, etc), all of which are derived from LSE-61. These requirements are verified by running tests, and recording the results of those tests in the LSST Jira system. The general approach to testing and verification in DM is described in more detail in LDM-503; note, in particular, the concepts and vocabulary described in LDM-503 §2.3.2.

This Verification Control Document (VCD) provides a summary of the status of requirements verification: which requirements are covered by which tests, and how many of those tests have been executed successfully. Section 2 presents a brief overview; the remainder of the document provides a matrix displaying all of the DM requirements, their corresponding verification elements, the applicable tests, and whether those tests have been executed.

The matrix is fully linked: any given test case mentioned in the matrix such as, LWV-T362, provides a link to the Jira element defining that test case. Similarly, relevant documentation such as test reports like DMTR-111 are linked to the bibliography and thence to the report itself¹.

Table 2: Summary overview of DM test cases executions.

Note that test cases may be associated with multiple requirements or verification elements, and requirements or verification elements may be associated with multiple test cases.

2.1 Coverage Description

The coverage of each Verification Element and Requirement is characterized by one of the statuses defined below.

2.1.1 Fully Verified

These are the Verification Elements and Requirements for which all of the associated Test Cases have been successfully executed. The last execution status for all test cases shall be **Passed** or **Passed w/Deviation**.

2.1.2 Partially Verified

These are the Verification Elements and Requirements for which at least one of the associated Test Cases have been successfully executed. The last execution status of the test cases shall be **Not Executed**, **Passed** or **Passed w/Deviation**.

2.1.3 With Failures

These are the Verification Elements and Requirements for which at least one of the associated Test Cases has a **Failure** as execution result.

2.1.4 Not Verified

These are the Verification Elements and Requirements for which none of the associated Test Cases have been executed.

2.1.5 Not Covered

These are the Verification Elements and Requirements for which there are not any associated Test Cases.

2.2 Test Executions Description

2.2.1 Passed

Test cases that have been executed without any problems. Issues may have been found during the execution, and linked to the test case, but they do not affect the verification process.

2.2.2 Passed with Deviation

Test cases for which the execution can be considered successful, but a deviation to the requirement is needed. The deviation shall be recorded in a Jira issue, type *Deviation* and linked to the test.

2.2.3 Failed

The test case execution failed. One or more Jira issues shall be filed and related with the test.

2.2.4 Not Executed

The test case has not been executed yet.

3 Verification Control

In the following subsections, a detailed overview of the requirements coverage for each specification is provided.

Where available, the priority is reported in round brackets, under the requirement or verification element identifier. For example (*p.1a*) denotes a 1a priority requirement. Requirements and verification elements for which no priority (*p.*) is specified inherit the priority for the higher-level requirement from which they are derived. For a full description of the prioritization levels, see LSE-61.
