# DM Verification Control Document

Gabriele Comoretto

LDM-692

Latest Revision: 2019-07-17

**Draft Revision NOT YET Approved** - This LSST document has been approved as a Content-Controlled Document by the LSST DM Change Control Board. If this document is changed or superseded, the new document will retain the Handle designation shown above. The control is on the most recent digital document with this Handle in the LSST digital archive and not printed versions. Additional information may be found in the corresponding DM RFC. - **Draft Revision NOT YET Approved**

## Abstract

The DM Verification Control Document is an extract from the LSST-wide systems engineering verification database (based on Jira) which provides an overview of the verification status of the Data Management Subsystem with respect to its requirements.

# DM Verification Control Document

## 1 Introduction

The requirements on the LSST Data Management System are described in LSE-61 and in the various lower-level requirements documents which are derived from it (e.g. LDM-554, LDM-555, LDM-636, etc). These requirements are verified by running tests, and recording the results of those tests in the LSST Jira system. The general approach to testing and verification in DM is described in more detail in LDM-503; note, in particular, the concepts and vocabulary described in LDM-503 §2.3.2.

This Verification Control Document (VCD) provides a summary of the status of requirements verification: which requirements are covered by which tests, and how many of those tests have been executed successfully. Section 2 presents a brief overview; the remainder of the document provides a matrix displaying all of the DM requirements, their corresponding verification elements, the applicable tests, and whether those tests have been executed.

The matrix is fully linked: any given test case mentioned in the matrix such as, LWV-T362, provides a link to the Jira element defining that test case. Similarly, relevant documentation such as test reports like DMTR-111 are linked to the bibliography and thence to the report itself<sup>1</sup>.

### 1.1 Applicable Documents

LSE-61	LSST DM Subsystem Requirements
LDM-503	LSST DM Test Plan
LDM-639	DM Acceptance Test Specification

---

<sup>1</sup>As such, you may find it useful to remember the appropriate keyboard shortcuts — often ⌘+[ (macOS) or ctrl+← (Windows/Linux) — to return to your previous position.

## 2 Summary Information

The following table provides an overview of the relationships between requirements, verification elements, and number of tests cases

	Count of Requirements	Count of Verification Elements
Not related to any Test Case	260	535
Related to NOT executed Test Cases	363	397
Related to Failed Test Cases	2	2
Related to Passed Test Cases	68	68
Total	693	1002

The following table provides the Test Cases result summary.

<b>Test Cases Results</b>	
Not Executed	447
Conditional Pass	7
Fail	1
Pass	28
Total	483

Note that test cases may be related to multiple requirements or verification elements, and requirements or verification elements may be related to multiple test cases.

### 3 Verification Control

Table 2: DM VCD Table.

Requirement	Verification Element	Test Case	Last Run	Test Status

## B Acronyms

Acronym	Description
API	Application Programming Interface
CA-DM-CON-ICD	Requirements for Interface between the Camera and Data Management (LSE-69)
CA-DM-DAQ-ICD	Requirements for Camera Data Acquisition Interface (LSE-68)
CA-DM-SUP-ICD	Requirements for Support-Data Exchanges between Data Management and Camera (LSE-130)
CPT-OCS-INT-ICD	Summit Computer Room Requirements (LSE-209)
DAQ	Data Acquisition System
DM	Data Management
DM-TS-AUX-ICD	Requirements for Auxiliary Instrumentation Interface between Data Management and Telescope (LSE-140)
DM-TS-CON-ICD	Requirements for Control System Interfaces between the Telescope & Data Management (LSE-75)
DMS	Data Management Subsystem
DMS-API-REQ	LSP API Aspect requirements (LDM-554)
DMS-LSP-REQ	Top level LSP requirements (LDM-554)
DMS-NB-REQ	LSP Notebook Aspect requirements (LDM-554)
DMS-PRTL-REQ	LSP Portal Aspect requirements (LDM-554)

DMS-REQ	Data Management top level requirements (LSE-61)
DMTR	DM Test (Plan and) Report
Data Management Subsystem	The subsystems within Data Management may contain a defined combination of hardware, a software stack, a set of running processes, and the people who manage them: they are a major component of the DM System operations. Examples include the 'Archive Operations Subsystem' and the 'Data Processing Subsystem'."
Data Management System	The computing infrastructure, middleware, and applications that process, store, and enable information extraction from the LSST dataset; the DMS will process peta-scale data volume, convert raw images into a faithful representation of the universe, and archive the results in a useful form. The infrastructure layer consists of the computing, storage, networking hardware, and system software. The middleware layer handles distributed processing, data access, user interface, and system operations services. The applications layer includes the data pipelines and the science data archives' products and services.
Document	Any object (in any application supported by DocuShare or design archives such as PDMWorks or GIT) that supports project management or records milestones and deliverables of the LSST Project
EP-DM-CON-ICD	Requirements for Interface between Data Management and EPO (LSE-131)
ICD	Interface Control Document
LDM	LSST Data Management (Document Handle)
LSE	LSST Systems Engineering (Document Handle)
LSP	LSST Science Platform
LSST	Large Synoptic Survey Telescope
LVV	LSST Verification and Validation (Jira project)
OCS	Observatory Control System
OCS-DM-COM-ICD	Requirements for OCS - Data Management Software Communication Interface (LSE-72)
Requirement	A declaration of a specified function or quantitative performance that the delivered system or subsystem must meet. It is a statement that identifies a necessary attribute, capability, characteristic, or quality of a system in order for the delivered system or subsystem to meet a derived or higher requirement, constraint, or function.

SYS-ALL-COM-ICD	Requirements for LSST Observatory Control System Communication Architecture and Protocol (LSE-70)
Specification	One or more performance parameter(s) being established by a requirement that the delivered system or subsystem must meet
Subsystem	A set of elements comprising a system within the larger LSST system that is responsible for a key technical deliverable of the project.
TS	Test Specification
VCD	Verification Control Document
Verification	The process of evaluating the design, including hardware and software - to ensure the requirements have been met; verification (of requirements) is performed by test, analysis, inspection, and/or demonstration

Draft
